

## Dinex testing SCR systems on London Taxis

The Greater London Authority (GLA), Transport for London (TfL) and the Public Carriage Office (PCO) has approved Dinex as a supplier of PM & NOx abating exhaust systems for the traditional black London Taxi cab. Dinex currently is running field tests with DPF & SCR systems on 2,5 litre diesel engines. It is expected that 10-15.000 taxis will be retrofitted with emission reducing exhaust solutions in London within the next 3-4 years and Dinex is at the forefront. The programme will presumably start beginning of 2nd quarter 2005.

The ongoing field tests, show an average consumption that only required refilling once per every 2 months.

Other reducing agents that can be used in the DiNOx system are Adgreen (34% aqueous ammonia) and UREA. Dinex has ensured the supply of specially adapted low pressure cylinders with high quality "quick-connections" for easy replacement and safety when operating such systems.

Dinex supplies the complete kit from turbo to tailpipe and with the Dinex modular systems we can supply kit solutions including oval and round filter design, electronic control units, hose connections, pressure valves, pumping systems and wiring looms.

The taxis will be using anhydrous ammonia as the SCR reducing agent, called "Greener Gas".

Greener Gas is 99,7% pure pressurised ammonia stored in a pressure cylinder. Greener Gas is the most economical dosing agent and last longest by volume when compared to urea and aqueous ammonia.
